Driving the vehicle

The following procedures should be observed to ensure safe driving:

■ Starting the hybrid system

→P. 169

■ Driving

STEP 1 With the brake pedal depressed, select the D position. (→P. 177)
Check that the shift position indicator shows D.

STEP 2 Release the parking brake. (→P. 186)

STEP 3 Gradually release the brake pedal and gently depress the accelerator pedal to accelerate the vehicle.

■ Stopping

STEP 1 With the shift position in D, depress the brake pedal.

STEP 2 If necessary, set the parking brake.

When the vehicle will be stopped for an extended period of time, select the P position. (→P. 177)

■ **Parking the vehicle**

STEP 1 Stop the vehicle completely.

STEP 2 Set the parking brake. (→P. 186)

STEP 3 Select the P position. (→P. 180)

Check that the shift position indicator shows P. (→P. 177)

STEP 4 Press the “POWER” switch to stop the hybrid system.

STEP 5 Slowly release the brake pedal.

STEP 6 Lock the door, making sure that you have the electronic key on your person.

When parking on a hill, block the wheels as needed.

Starting off on a uphill

STEP 1 Firmly set the parking brake with the brake pedal depressed, and then select the D position.

STEP 2 Release the brake pedal and gently depress the accelerator pedal.

STEP 3 Release the parking brake.

n **When starting off on a uphill**

The hill-start assist control is available. (→P. 254)

n **Driving in the rain**

l Drive carefully when it is raining, because visibility will be reduced, the windows may become fogged-up, and the road will be slippery.

l Drive carefully when it starts to rain, because the road surface will be especially slippery.

l Refrain from high speeds when driving on an expressway in the rain, because there may be a layer of water between the tires and the road surface, preventing the steering and brakes from operating properly.

n **Breaking in your new Lexus**

To extend the life of the vehicle, observing the following precautions is recommended:

l For the first 200 miles (300 km):
Avoid sudden stops.

l For the first 1000 miles (1600 km):

- Do not drive at extremely high speeds.
- Avoid sudden acceleration.
- Do not drive at a constant speed for extended periods.

n **Operating your vehicle in a foreign country**

Comply with the relevant vehicle registration laws and confirm the availability of the correct fuel. (→P. 653)

For efficient use

- Shift the shift position to D when driving.
  In the N position, the gasoline engine operates but electricity cannot be generated. The hybrid battery (traction battery) will discharge, requiring unnecessary engine power to recharge.
- Drive your vehicle smoothly.
  Avoid abrupt acceleration and deceleration. Gradual acceleration and deceleration will make more effective use of the electric motor (traction motor) without having to use gasoline engine power.
- Avoid repeated acceleration.
  Repeated acceleration consumes hybrid battery (traction battery) power, resulting in poor acceleration. Battery power can be restored by driving with the accelerator pedal slightly released.
- Shift the shift position to P when parking.
  In the N position, the hybrid battery (traction battery) does not recharge. Leaving the shift position in the N position for an extended period of time may discharge the hybrid battery (traction battery). The vehicle cannot run if the hybrid battery (traction battery) is discharged.

CAUTION

- **When starting the vehicle**

  Always keep your foot on the brake pedal while stopped with the hybrid system operating. This prevents the vehicle from creeping.

- **When driving the vehicle**

  - Do not drive if you are unfamiliar with the location of the brake and accelerator pedals to avoid depressing the wrong pedal.
    - Accidentally depressing the accelerator pedal instead of the brake pedal will result in sudden acceleration that may lead to an accident that could result in death or serious injury.
    - When backing up, you may twist your body around, leading to a difficulty in operating the pedals. Make sure to operate the pedals properly.
    - Make sure to keep a correct driving posture even when moving the vehicle only slightly. This allows you to depress the brake and accelerator pedals properly.
    - Depress the brake pedal using your right foot. Depressing the brake pedal using your left foot may delay response in an emergency, resulting in an accident.
  - The driver should pay extra attention to pedestrians when the vehicle is powered only by the electric motor (traction motor). Because there is no engine noise, the pedestrians may misjudge the vehicle's movement.
  - Do not drive the vehicle over or stop the vehicle near flammable materials.
    The exhaust system and exhaust gases can be extremely hot. These hot parts may cause a fire if there is any flammable material nearby.
  - Do not let the vehicle roll backward while a forward driving position is selected, or roll forward while the shift position is in R.
    Doing so may result in an accident or damage to the vehicle.

CAUTION

- If the smell of exhaust is noticed inside the vehicle, open the windows and check that the back door is closed. Large amounts of exhaust in the vehicle can cause driver drowsiness and an accident, resulting in death or a serious health hazard. Have the vehicle inspected by your Lexus dealer immediately.
- Do not press the P position switch while the vehicle is moving.
  Doing so can damage the transmission and may result in a loss of vehicle control.
- Do not shift the shift position to R while the vehicle is moving forward.
  Doing so can damage the transmission and may result in a loss of vehicle control.
- Do not shift the shift position to D while the vehicle is moving backward.
  Doing so can damage the transmission and may result in a loss of vehicle control.
- Shifting the shift position to N while the vehicle is moving will disengage the hybrid system. Engine braking is not available with the hybrid system disengaged and the transmission may be damaged.
- During normal driving, do not turn off the hybrid system. Turning the hybrid system off while driving will not cause loss of steering or braking control, but the power assist to these systems will be lost. This will make it more difficult to steer and brake, so you should pull over and stop the vehicle as soon as it is safe to do so.
  However, in the event of an emergency, such as if it becomes impossible to stop the vehicle in the normal way: →P. 647
- Use engine braking (shift position B) to maintain a safe speed when driving down a steep hill.
  Using the brakes continuously may cause the brakes to overheat and lose effectiveness. (→P. 177)
- Do not adjust the positions of the steering wheel, the seat, or the inside or outside rear view mirrors while driving.
  Doing so may result in a loss of vehicle control that can cause accidents, resulting in death or serious injury.
- Always check that all passengers' arms, heads or other parts of their body are not outside the vehicle, as this may result in death or serious injury.

CAUTION

- Do not drive in excess of the speed limit. Even if the legal speed limit permits it, do not drive over 85 mph (140 km/h) unless your vehicle has high-speed capability tires. Driving over 85 mph (140 km/h) may result in tire failure, loss of control and possible injury. Be sure to consult a tire dealer to determine whether the tires on your vehicle are high-speed capability tires or not before driving at such speeds.

When driving on slippery road surfaces

- Sudden braking, acceleration and steering may cause tire slippage and reduce your ability to control the vehicle, resulting in an accident.
- Abrupt changes from shift position D to B and rapid changes in the engine speed could cause the vehicle to skid, resulting in an accident.
- After driving through a puddle, lightly depress the brake pedal to make sure that the brakes are functioning properly. Wet brake pads may prevent the brakes from functioning properly. If the brakes on only one side are wet and not functioning properly, steering control may be affected, resulting in an accident.

When changing the shift position

Be careful not to change the shift position with the accelerator pedal depressed. Changing the shift position to any positions other than P or N may cause the vehicle to accelerate abruptly, causing an accident and resulting in death or serious injury.

After changing the shift position, make sure to confirm the current shift position displayed on the shift position indicator inside the meter.

CAUTION

- **If you hear a squealing or scraping noise (brake pad wear limit indicators)**

  Have your Lexus dealer check and replace the brake pads as soon as possible. Rotor damage may result if the pads are not replaced when needed.

  It is dangerous to drive the vehicle when the wear limits of the brake pads and/or those of the brake discs are exceeded.

- **When the vehicle is stopped**

  - Do not depress the accelerator pedal unnecessarily.
    If the vehicle is in any shift position other than P or N, the vehicle may accelerate suddenly and unexpectedly, causing an accident.
  - Do not leave the vehicle with the hybrid system on for a long time.
    If such a situation cannot be avoided, park the vehicle in an open space and check that exhaust fumes do not enter the vehicle interior.
  - In order to prevent accidents due to the vehicle rolling away, always keep depressing the brake pedal while the "READY" indicator is on. Apply the parking brake as necessary.
  - If the vehicle is stopped on an incline, in order to prevent accidents caused by the vehicle rolling forward or backward, always depress the brake pedal and securely apply the parking brake as needed.
  - Avoid revving or racing the engine.
    Running the engine at high speed while the vehicle is stopped may cause the exhaust system to overheat, which could result in a fire if combustible material is nearby.

CAUTION

When the vehicle is parked

- Make sure to firmly apply the parking brake and select the P position.
  Failure to do so may cause the vehicle to move, or the vehicle to accelerate suddenly if the accelerator pedal is accidentally depressed. Also, when leaving the vehicle, make sure to turn off the hybrid system and lock the vehicle.
  Sound or shuddering may not be noticed even when the hybrid vehicle is ready to drive (when the "READY" indicator is illuminated).
- Do not leave glasses, cigarette lighters, spray cans, or soft drink cans in the vehicle when it is in the sun.
  Doing so may result in the following:
  - Gas may leak from a cigarette lighter or spray can, and may lead to a fire.
  - The temperature inside the vehicle may cause the plastic lenses and plastic material of glasses to deform or crack.
  - Soft drink cans may fracture, causing the contents to spray over the interior of the vehicle, and may also cause a short circuit in the vehicle's electrical components.
- Do not leave cigarette lighters in the vehicle. If a cigarette lighter is in a place such as the glove box or on the floor, it may be lit accidentally when luggage is loaded or the seat is adjusted, causing a fire.
- Do not attach adhesive discs to the windshield or windows. Do not place containers such as air fresheners on the instrument panel or dashboard. Adhesive discs or containers may act as lenses, causing a fire in the vehicle.
- Do not leave a door or window open if the curved glass is coated with a metallized film such as a silver-colored one. Reflected sunlight may cause the glass to act as a lens, causing a fire.

CAUTION

- Do not touch the exhaust pipe while the hybrid system is operating or immediately after turning the hybrid system off.
  Doing so may cause burns.
- Do not leave the hybrid system operating in an area with snow build-up, or where it is snowing. If snowbanks build up around the vehicle while the hybrid system is operating, exhaust gases may collect and enter the vehicle. This may lead to death or a serious health hazard.

Exhaust gases

Exhaust gases include harmful carbon monoxide (CO), which is colorless and odorless. Inhaling exhaust gases may lead to death or a serious health hazard.

- If the vehicle is in a poorly ventilated area, stop the hybrid system. In a closed area, such as a garage, exhaust gases may collect and enter the vehicle. This may lead to death or a serious health hazard.
- The exhaust system should be checked occasionally. If there is a hole or crack caused by corrosion, damage to a joint or abnormal exhaust noise, be sure to have the vehicle inspected and repaired by your Lexus dealer. Failure to do so may allow exhaust gases to enter the vehicle, resulting in death or a serious health hazard.

CAUTION

- **When taking a nap in the vehicle**

  Always turn the hybrid system off. Otherwise, if you accidentally move the shift lever or depress the accelerator pedal, this could cause an accident or fire due to hybrid system overheating. Additionally, if the vehicle is parked in a poorly ventilated area, exhaust gases may collect and enter the vehicle, leading to death or a serious health hazard.

- **When braking**

  - When the brakes are wet, drive more cautiously.
    Braking distance increases when the brakes are wet, and this may cause one side of the vehicle to brake differently than the other side. Also, the parking brake may not securely hold the vehicle.
  - If the electronically controlled assist function does not operate, do not follow other vehicles closely and avoid downhill or sharp turns that require braking.
    In this case, braking is still possible, but the brake pedal should be depressed more firmly than usual. Also, the braking distance will increase.
  - The brake system consists of 2 individual hydraulic systems; if one of the systems fails, the others will still operate. In this case, the brake pedal should be depressed more firmly than usual and the braking distance will increase. If this happens, do not continue to drive the vehicle. If the brake system warning light (red indicator) comes on together with the buzzer sound while driving, immediately stop the vehicle in a safe place and contact your Lexus dealer.

NOTICE

■ **When driving the vehicle**

- Do not depress the accelerator and brake pedals at the same time during driving. If the brake pedal is depressed while driving with the accelerator pedal depressed, driving torque may be restrained.
- Do not use the accelerator pedal or depress the accelerator and brake pedals at the same time to hold the vehicle on a hill.

■ **Avoiding damage to vehicle parts**

- Do not turn the steering wheel fully in either direction and hold it there for an extended period of time.
  Doing so may damage the power steering motor.
- When driving over bumps in the road, drive as slowly as possible to avoid damaging the wheels, underside of the vehicle, etc.

■ **If you get a flat tire while driving**

A flat or damaged tire may cause the following situations. Hold the steering wheel firmly and gradually depress the brake pedal to slow down the vehicle.

- It may be difficult to control your vehicle.
- The vehicle will make abnormal sounds or vibrations.
- The vehicle will lean abnormally.

Information on what to do in case of a flat tire (→P. 615)

NOTICE

When encountering flooded roads

Do not drive on a road that has flooded after heavy rain etc. Doing so may cause the following serious damage to the vehicle:

- Engine stalling
- Short in electrical components
- Engine damage caused by water immersion

In the event that you drive on a flooded road and the vehicle is flooded, be sure to have your Lexus dealer check the following:

- Brake function
- Changes in quantity and quality of engine oil, transmission fluid for the hybrid system etc.
- Lubricant condition for the bearings and suspension joints (where possible), and the function of all joints, bearings, etc.

If the P position control system is damaged by flooding, it may not be possible to shift the shift position to P, or from P to other positions. When the shift position cannot be changed from P to any other position, the front wheels will lock, and you will be unable to tow the vehicle with the front wheels on the ground.

Power (ignition) switch

Performing the following operations when carrying the electronic key on your person starts the hybrid system or changes "POWER" switch modes.

Starting the hybrid system

STEP 1 Check that the parking brake is set.

STEP 2 Firmly depress the brake pedal.

Check that the "POWER" switch indicator turns green. If the indicator does not turn green, the hybrid system cannot be started.

When the shift position is N, the hybrid system cannot start. Select the P position when starting the hybrid system.

STEP 3

Press the "POWER" switch.

Continue depressing the brake pedal until the hybrid system is completely started.

The hybrid system can be started from any mode.

If the "READY" indicator changes from a flashing light to a solid light and the buzzer sounds, the hybrid system is starting normally.

The vehicle can move when the "READY" indicator is on even if the engine is stopped. (The gasoline engine starts or stops automatically in accordance with the state of the vehicle.)

■ Stopping the hybrid system

STEP 1 Stop the vehicle completely.

STEP 2 Set the parking brake. (→P. 186)

STEP 3 Select the P position. (→P. 180)

Check that the shift position indicator shows P. (→P. 177)

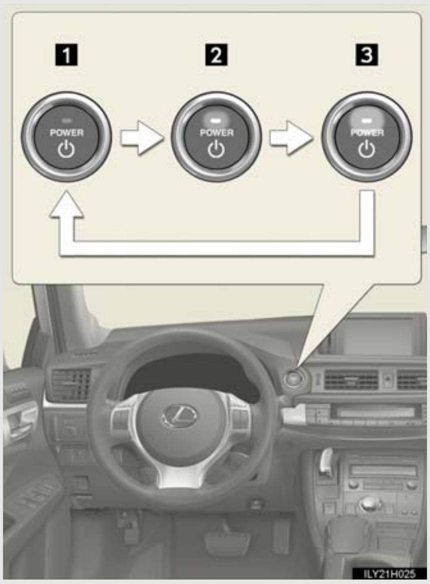

STEP 4 Press the “POWER” switch.

The hybrid system will stop, and the meter display will be extinguished (the shift position indicator will be extinguished a few seconds after the meter display).

STEP 5 Slowly release the brake pedal and check that the indicator on the “POWER” switch is off.

■ Changing “POWER” switch modes

Modes can be changed by pressing the “POWER” switch with the brake pedal released. (The mode changes each time the switch is pressed.)

1 Off

The emergency flashers can be used.

2 ACCESSORY mode

Some electrical components such as the audio system can be used.

The “POWER” switch indicator turns amber.

3 ON mode

All electrical components can be used.

The “POWER” switch indicator turns amber.

Auto power off function

If the vehicle is left in ACCESSORY or ON mode (the hybrid system is not operating) for more than an hour with the shift position in P, the "POWER" switch will automatically turn off. However, this function cannot entirely prevent the 12-volt battery from discharging. Do not leave the vehicle with the "POWER" switch in ACCESSORY or ON mode for long periods of time when the hybrid system is not operating.

Sounds and vibrations specific to a hybrid vehicle

→P. 27

Electronic key battery depletion

→P. 64

When the ambient temperature is low, such as during winter driving conditions

It may take time until the "READY" indicator to come on.

Conditions affecting operation

→P. 63

Notes for the entry function

→P. 55

If the hybrid system does not start

The immobilizer system may not have been deactivated. (→P. 111)

When the "POWER" switch indicator flashes in amber

The system may be malfunctioning. Have the vehicle inspected by your Lexus dealer immediately.

If the "READY" indicator does not come on

If the "READY" indicator does not come on when you press the "POWER" switch with the shift position in P and the brake pedal depressed, contact your Lexus dealer immediately.

If the hybrid system is malfunctioning

→P. 582

If the electronic key battery is depleted

→P. 539

Operation of the “POWER” switch

- When operating the “POWER” switch, one short, firm press is enough. If the switch is pressed improperly, the hybrid system may not start or the “POWER” switch mode may not change. It is not necessary to press and hold the switch.
- If attempting to restart the hybrid system immediately after turning the “POWER” switch off, the hybrid system may not start in some cases. After turning the “POWER” switch off, please wait a few seconds before restarting the hybrid system.

Automatically P position selection function

→P. 182

When the P position control system malfunctions

The “POWER” switch will not be able to be turned off. In such a case, the switch can be turned off after applying the parking brake.
Have the vehicle inspected by your Lexus dealer immediately.

⚠ CAUTION

When starting the hybrid system

Always start the hybrid system while sitting in the driver’s seat. Do not depress the accelerator pedal while starting the hybrid system under any circumstances.
Doing so may cause an accident resulting in death or serious injury.

Stopping the hybrid system in an emergency

If you want to stop the hybrid system in an emergency while driving the vehicle, press and hold the “POWER” switch for more than 3 seconds or press it briefly for 3 times or more in succession.
However, do not touch the “POWER” switch while driving except in an emergency. Turning the hybrid system off while driving will not cause loss of steering or braking control, but the power assist to these systems will be lost. This will make it more difficult to steer and brake, so you should pull over and stop the vehicle as soon as it is safe to do so.

NOTICE

■ **To prevent 12-volt battery discharge**

- Do not leave the "POWER" switch in ACCESSORY or ON mode for long periods of time without the hybrid system on.
- If the hybrid system is off, but the indicator on the "POWER" switch is illuminated, this indicates that the "POWER" switch is still turned on. When exiting the vehicle, always check that the "POWER" switch is off.

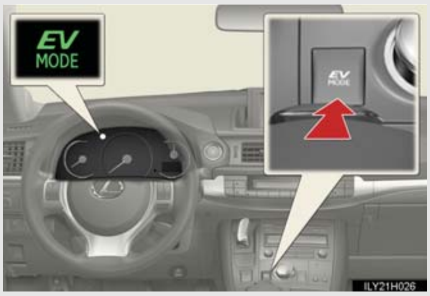

■ **Symptoms indicating a malfunction with the "POWER" switch**

If the "POWER" switch seems to be operating somewhat differently than usual, such as the switch sticking slightly, there may be a malfunction. Contact your Lexus dealer immediately.

EV drive mode

In EV drive mode, the electric motor (traction motor), powered by the hybrid battery (traction battery), is used to drive the vehicle.

This mode allows you to drive in residential areas late at night, or in indoor parking lots etc. without concern for noises and exhaust gas emissions.

Turns EV drive mode on/off

When EV drive mode is turned on, the EV drive mode indicator will come on. Pressing the switch when in EV drive mode will return the vehicle to normal driving (using the gasoline engine and electric motor [traction motor]).

Situations in which EV drive mode cannot be turned on

It may not be possible to turn EV drive mode on in the following situations. If it cannot be turned on, a buzzer will sound and a message will be shown on the multi-information display.

- The temperature of the hybrid system is high.
  The vehicle has been left in the sun, driven on a hill, driven at high speeds, etc.
- The temperature of the hybrid system is low.
  The vehicle has been left in temperatures lower than about 68 °F (20 °C) for a long period of time etc.
- The gasoline engine is warming up.
- The hybrid battery (traction battery) is low.
  An "Energy Monitor" display of level 3 or lower may indicate a low battery level. (→P. 198)
- Vehicle speed is high.
- The accelerator pedal is depressed firmly or the vehicle is on a hill etc.
- The windshield defogger is in use.

Automatic cancellation of EV drive mode

When driving in EV drive mode, the gasoline engine may automatically restart in the following situations. When EV drive mode is canceled, a buzzer will sound and the EV drive mode indicator will flash and go off.

- The hybrid battery (traction battery) becomes low.
  The remaining battery level indicated in the "Energy Monitor" display is level 2 or lower. (→P. 198)
- Vehicle speed becomes high.
- The accelerator pedal is depressed firmly or the vehicle is on a hill etc.

When it is possible to inform the driver of automatic cancelation in advance, a prior notice screen will appear on the multi-information display.

- **Possible driving distance when driving in EV drive mode**

In EV drive mode, it is possible to drive up to about 1/2 mile (1 km) if driving at a speed of about 25 mph (40 km/h) or less. (The distance that is possible depends on the hybrid battery [traction battery] level and driving conditions.)

- **Fuel economy**

CT200h is designed to achieve the best possible fuel economy during normal driving (using the gasoline engine and electric motor [traction motor]). Driving in EV drive mode more than necessary may lower fuel economy.

CAUTION

- **While driving**

When driving in EV drive mode, pay special attention to the area around the vehicle. Because there is no engine noise, pedestrians, people riding bicycles or other people and vehicles in the area may not be aware of the vehicle starting off or approaching them, so take extra care while driving.

Hybrid transmission

Select a shift position appropriate for the driving conditions.

Shifting the shift lever

1 Shift lever

Operate the shift lever gently and ensure correct shifting operation.

 When shifting to the D or R positions, move the shift lever along the shift gate.

 To shift to the N position, slide the shift lever to the left and hold it. The shift position will change to N.

 Shifting to B is only possible when shift position D is selected.

 The shift lever will always return to this original position after a shifting operation.

When shifting from P to N, D or R, from D to R, or from R to D, ensure that the brake pedal is being depressed and the vehicle is stationary.

2 Shift position indicator

The current shift position is illuminated.

When any shift position other than D or B is selected, the arrow toward B disappears from the shift position indicator.

When selecting the shift position, make sure that the shift position has been changed to the desired position by checking the shift position indicator provided on the instrument cluster.

n Shift position purpose

Shift position	Function
P	Parking the vehicle/starting the hybrid system
R	Reversing
N	Neutral
D	Normal driving*
B	Applying engine braking or strong braking when the accelerator pedal has been released on steep downward slopes etc.

*: For good fuel economy and noise reduction, the D position should usually be used.

n Selecting a driving mode

The following modes can be selected to suit driving conditions:

1 Normal mode

2 Eco drive mode

Use Eco drive mode to help achieve low fuel consumption during trips that involve frequent accelerating and braking.

When the driving mode select switch is turned left, the "ECO MODE" indicator comes on in the instrument cluster.

Press the switch to change the driving mode to normal mode.

3 Sport mode

Use when high levels of response and feeling are desirable, such as when driving in mountainous regions or when overtaking.

When the driving mode select switch is turned right, the "SPORT MODE" indicator comes on in the instrument cluster.

Press the switch to change the driving mode to normal mode.

P position switch

n When shifting the shift position to P

Fully stop the vehicle and set the parking brake, and then press the P position switch.

When the shift position is changed to P, the switch indicator comes on.

Check that the P position is illuminated on the shift position indicator.

n Shifting the shift position from P to other positions

l While depressing the brake pedal firmly, operate the shift lever. If the shift lever is operated without depressing the brake pedal, the buzzer will sound and the shifting operation will be disabled.

l When selecting the shift position, make sure that the shift position has been changed to the desired position by checking the shift position indicator provided on the instrument cluster.

l The shift position cannot be changed from P to B directly.

n **Operation of the air conditioning system in Eco drive mode (without navigation system)**

Eco drive mode controls the heating/cooling operations and fan speed of the air conditioning system to enhance fuel efficiency. (→P. 286) To improve air conditioning performance, adjust the fan speed or turn off Eco drive mode.

n **Operation of the air conditioning system in Eco drive mode (with navigation system)**

Eco drive mode controls the heating/cooling operations and fan speed of the air conditioning system to enhance fuel efficiency. To improve air conditioning performance, adjust the fan speed or turn off Eco drive mode. (Refer to the "Navigation System Owner's Manual".)

n **For the shift positions**

l When the "POWER" switch is off, the shift position cannot be changed.

l When the "POWER" switch is in ON mode (the hybrid system is not operating), the shift position can only be changed to N.

l When the "READY" indicator is on, the shift position can be changed from P to D, N or R.

l The shift position can only be changed to B directly from D.

In addition, if the shift position is changed in any of the following situations, the buzzer will sound and the shifting operation will be disabled or the shift position will automatically change to N. When this happens, select an appropriate shift position.

l Situations where the shifting operation will be disabled:
- When the shift position is changed from P to another position without depressing the brake pedal.
- When the shift position is changed from P or N to B.

l Situations where the shift position will automatically change to N:
- When the P position switch is pressed while the vehicle is running.*
- When shift position R is selected when the vehicle is moving forward.
- When shift position D is selected when the vehicle is moving in reverse.
- When the shift position is changed from R to B.

*: Shift position may be changed to P when driving at extremely low speeds.

Reverse warning buzzer

When shifting into R, a buzzer will sound to inform the driver that the shift position is in R.

About engine braking

When shift position B is selected, releasing the accelerator pedal will apply engine braking.

- When the vehicle is driven at high speeds, compared to ordinary gasoline-fueled vehicles, the engine braking deceleration is felt less than that of other vehicles.
- The vehicle can be accelerated even when shift position B is selected.

If the vehicle is driven continuously in the B position, fuel efficiency will become low. Usually, select the D position.

Automatically P position selection function

When the “POWER” switch is in ON mode while the shift position is in a position other than P and the vehicle is stopped completely, pressing the “POWER” switch will cause the automatically P position selection function to operate together with the “POWER” switch being turned to off.

If the shift position cannot be shifted from P

There is a possibility that the 12-volt battery is discharged. Check the 12-volt battery in this situation. (→P. 635)

Sport mode automatic deactivation

Sport mode is automatically deactivated if the “POWER” switch is turned off after driving in sport mode.

After recharging/reconnecting the 12-volt battery

→P. 514

Customization

Settings (e.g. Reverse warning buzzer) can be changed.
(Customizable features →P. 684)

CAUTION

- **When driving on slippery road surfaces**

  Do not accelerate or shift the shift position suddenly.
  Sudden changes in engine braking may cause the vehicle to spin or skid, resulting in an accident.

- **For the shift lever**

  Do not remove the shift lever knob or use anything but a genuine Lexus shift lever knob. Also, do not hang anything on the shift lever.
  Doing so could prevent the shift lever from returning to position, causing unexpected accidents to occur when the vehicle is in motion.

- **P position switch**

  Do not press the P position switch while the vehicle is moving.
  If the P position switch is pressed when driving at very low speeds (for example, directly before stopping the vehicle), the vehicle may stop suddenly when the shift position switches to P, which could lead to an accident.

NOTICE

- **Hybrid battery (traction battery) charge**

  If the shift position is in N, the hybrid battery (traction battery) will not be charged. To help prevent the battery from discharging, avoid leaving the N position selected for an extended period of time.

- **Situations where P position control system malfunctions are possible**

  If any of the following situations occurs, P position control system malfunctions are possible.
  Immediately stop the vehicle in a safe place on level ground, apply the parking brake, and then contact your Lexus dealer.

  - When the "P LOCK MALFUNCTION" appears on the multi-information display. (→P. 595)
  - When the shift position indicator remains off.

- **Notes regarding shift lever and P position switch operation**

  Avoid repeatedly operating the shift lever and P position switch in quick succession. The system protection function may activate it will not be temporarily possible to shift the shift position other than P. If this happens, please wait for a while before attempting to change the shift position again.

Turn signal lever

The turn signal lever can be used to show the following intention of the driver:

1 Right turn

2 Left turn

3 Lane change to the right (push and hold the lever part-way)

The right hand signals will flash until you release the lever.

4 Lane change to the left (push and hold the lever partway)

The left hand signals will flash until you release the lever.

Turn signals can be operated when

The "POWER" switch is in ON mode.

If the indicator flashes faster than usual

Check that a light bulb in the front or rear turn signal lights has not burned out.

Parking brake

To set the parking brake, fully depress the parking brake pedal with your left foot while depressing the brake pedal with your right foot.
(Depressing the pedal again releases the parking brake.)

---

n **Parking brake engaged warning buzzer**

The buzzer sounds to indicate that parking brake is still engaged (with the vehicle having reached a speed of 3 mph [5 km/h]). (→P. 599)

n **Usage in winter time**

See "Winter driving tips" for parking brake usage in winter time. (→P. 270)

NOTICE

n **Before driving**

Fully release the parking brake.
Driving the vehicle with the parking brake set will lead to brake components over-heating, which may affect braking performance and increase brake wear.

Horn

To sound the horn, press on or close to the mark.

- **After adjusting the steering wheel**

  Make sure that the steering wheel is securely locked.
  The horn may not sound if the steering wheel is not securely locked. (→P. 94)
